# A double-edged fraud.

- Phreaking is a multi-billion dollar international fraud by organised crime with links to terrorists — Al Qaeda and the Mumbai bombers — and you'll be an unwitting accomplice in this fraud

- Phreakers perpetrate this crime by operating their own telcos and when they strike they'll use your PABX in their network of phreaked PABXs to carry their illegal phone traffic — and you'll have to pay for it

- Phreakers could be "grooming" your PABX right now in preparation for them commissioning it into service whenever they need it to route their illegal call traffic through it — and you won't even know it

- Phone fraud is **FOUR** times bigger than credit card fraud globally

- Your PABX is one of the most vital assets of your business — and without installed security, its most vulnerable.

- If your PABX is attacked, your phone bill could be up to **20 times** higher than normal — and often even more than this — but you won't know until your phone bill arrives

- The resident security in your PABX and voicemail, including all your passwords, can be breached by phreakers in milliseconds

- Once phreakers have access to your PABX, they automatically avoid all your network and internet security and immediately have backdoor access to your PC and data networks

- Your telco carrier and/or your airtime provider will expect you to pay the bill phreakers make via your PABX which at the very worst and if it's high enough, could bankrupt your business

- Passwords, alerts and regular audits of your PABX will not protect you on any level from phreakers

- Most phreaking attacks occur after hours or at the weekend when detection is least likely

- If conventional weapons are used against phreakers, you'll lose significant functionality of your PABX because the only way to contain them will be to shut down **ALL** outbound calling access and your voicemail — but this will still not prevent your PABX's passwords from being breached

- Control Phreak is the **ONLY** PABX firewall to provide automatic protection against phreakers - all day, every day  - leaving you with access to **ALL** the features of your PABX and voicemail

- Control Phreak is the **ONLY** PABX firewall which can *detect and kill* diverted calls—the preferred route of phreakers

*All the reasons you need to secure your PABX automatically from phreakers.*
