- Optional key expiry or start date
- Secure one-day password
- No master keys

The PinNet4 is an access control system for apartment blocks or office buildings. Where there is no on-site administrator, Entryphone® offers off-line or on-line administration services. Keys can be added or deleted using a unique encrypted activation code or via the PinNet4's built in web-server or the unit's GSM modem.

Keys

The PinNet4 can be factory programmed by Entryphone® before it is supplied and the key and programme records are contained in the unit's memory. Every key has a unique serial number laser engraved onto it and we keep a secure record of every key we supply.

Built-in Web Server

With a built-in Web server, the PinNet4 can be connected directly to a PC or to an IP network and programmed using any web browser.
